

AND Operator:

The AND operator only gives TRUE if both inputs are TRUE.

Expression:

A and B

A	B	A and B
TRUE	TRUE	TRUE
TRUE	FALSE	FALSE
FALSE	TRUE	FALSE
FALSE	FALSE	FALSE

Even if just one value is FALSE, the whole expression becomes FALSE. Both conditions must be TRUE for the result to be TRUE.

OR Operator:

The OR operator gives TRUE if at least one input is TRUE.

Expression:

A or B

A	B	A or B
TRUE	TRUE	TRUE
TRUE	FALSE	TRUE
FALSE	TRUE	TRUE
FALSE	FALSE	FALSE

The only time OR is FALSE is when both inputs are FALSE.
